

Topic: 12. Nested Serializers for Related Models Part 1

Speaker: Personal | Notebook: API Development using Django Framework

For additional reference, use [RestAPI Documentation](#) on nested serializer.

You can use the [Online JSON Viewer](#) to see/view the code or text.

1. Create the new app BLOGS where each blog post may have several comments. In the terminal, use the create startapp command:

```
(env)
rosil@LearnCodeRepeat MINGW64 /c/Users/rosil/OneDrive/Documents/MyCodingCareer/Django Projects/API De
REST_APIProject
$ python manage.py startapp blogs
```

2. Register this new app in the SETTINGS.PY:

```
File Edit Selection View ... DjangoREST_APIProject  
EXPLORER  
DJANGOREST_APIPROJECT  
  > api  
  > blogs  
    > migrations  
  __init__.py  
  admin.py  
  apps.py  
  models.py  
  tests.py  
  views.py  
  > django_rest_main  
    > __pycache__  
    __init__.py  
    asgi.py  
    settings.py  
    urls.py  
    wsgi.py  
  > employees  
  > env  
  > students  
  db.sqlite3  
  manage.py  
settings.py X models.py employees admin.py students  
django_rest_main > settings.py > ...  
26 DEBUG = True  
27  
28 ALLOWED_HOSTS = []  
29  
30  
31 # Application definition  
32  
33 INSTALLED_APPS = [  
34     'django.contrib.admin',  
35     'django.contrib.auth',  
36     'django.contrib.contenttypes',  
37     'django.contrib.sessions',  
38     'django.contrib.messages',  
39     'django.contrib.staticfiles',  
40     'rest_framework',  
41     'students',  
42     'employees',  
43     'api',  
44     'blogs',  
45 ]  
46  
47  
48 MIDDLEWARE = [  
49     'django.middleware.security.SecurityMiddleware',
```

3. Create the models BLOG POST AND COMMENTS:

```
File Edit Selection View ... DjangoREST_APIProject  
EXPLORER  
DJANGOREST_APIPROJECT  
  > api  
  > blogs  
    > migrations  
  __init__.py  
  admin.py  
  apps.py  
  models.py  
  tests.py  
  views.py  
  > django_rest_main  
    > __pycache__  
    __init__.py  
    asgi.py  
    settings.py  
settings.py X models.py blogs X models.py employees admin.py students urls.py djang  
blogs > models.py > ...  
1 from django.db import models  
2  
3 class Blog(models.Model):  
4     blog_title = models.CharField(max_length=100)  
5     blog_body = models.TextField()  
6  
7     def __str__(self):  
8         return self.blog_title  
9  
10  
11 class Comment(models.Model):  
12     blog = models.ForeignKey(Blog, on_delete=models.CASCADE, related_name='comments')  
13     comment = models.TextField()  
14  
15     def __str__(self):  
16         return self.comment
```

4. Register the models in ADMIN.PY:

```
File Edit Selection View ... DjangoREST_APIProject
EXPLORER
  DJANGOREST_APIPROJECT
    > api
    > blogs
      > migrations
      admin.py
      apps.py
      models.py
  settings.py
  models.py
  blogs
  admin.py
  mod

blogs > admin.py
1 from django.contrib import admin
2 from .models import Blog, Comment
3
4 admin.site.register(Blog)
5 admin.site.register(Comment)
6
```

5. Make the migrations.

```
PROBLEMS OUTPUT DEBUG CONSOLE TERMINAL PORTS bash
• $ python manage.py startapp blogs
(env)
rosil@LearnCodeRepeat MINGW64 /c/Users/rosil/OneDrive/Documents/MyCodingCareer/Django Projects/API De
REST_APTProject
• $ python manage.py makemigrations
Migrations for 'blogs':
  blogs\migrations\0001_initial.py
    + Create model Blog
    + Create model Comment
(env)
rosil@LearnCodeRepeat MINGW64 /c/Users/rosil/OneDrive/Documents/MyCodingCareer/Django Projects/API De
REST_APTProject
• $ python manage.py migrate
Operations to perform:
  Apply all migrations: admin, auth, blogs, contenttypes, employees, sessions, students
Running migrations:
  Applying blogs.0001_initial... OK
(env)
rosil@LearnCodeRepeat MINGW64 /c/Users/rosil/OneDrive/Documents/MyCodingCareer/Django Projects/API De
REST_APTProject
• $
```

6. Use the admin dashboard to add a new record.

7. Create a new file SERIALIZER in the BLOG FOLDER. You may also use the serializer.py in the API folder. This may work so add the serializers.py where you want it. For organization, have it in the app you want to use the serializer with.

```

1  from rest_framework import serializers
2  from .models import Blog, Comment
3
4  class CommentSerializer(serializers.ModelSerializer):
5      class Meta:
6          model = Comment
7          fields = "__all__"
8
9  class BlogSerializer(serializers.ModelSerializer):
10     class Meta:
11         model = Blog
12         fields = "__all__"

```

8. Create the path in the APIURLS.PY:

```

1  from django.urls import path, include
2  from . import views
3  from rest_framework.routers import DefaultRouter
4
5  # uses the Viewsets for CRUD
6  router = DefaultRouter()
7  router.register('employees',views.EmployeeViewSet,basename='employee')
8
9  urlpatterns = [
10     #uses the function-based views
11     path('students/',views.studentsView),
12     path('students/<int:pk>/',views.studentDetailView),
13
14     #uses the class-based views, mixins, generics
15     # path('employees/',views.Employees.as_view()),
16     # path('employees/<int:pk>/',views.EmployeeDetail.as_view()),
17
18     # uses viewsets
19     path('',include(router.urls)),
20
21     # uses nested serializers
22     path('blogs/',views.BlogsView.as_view()),
23     path('comments/',views.CommentsView.as_view()),
24
25 ]

```

9. Update the VIEWS.PY.

Add the models BLOG & COMMENT:

```
File Edit Selection View ... DjangoREST_APIProject  
EXPLORER  
DJANGOREST_APIPROJECT  
  api  
  > __pycache__  
  > migrations  
  > __init__.py  
  > admin.py  
  > apps.py  
  > models.py  
  > serializers.py  
  > tests.py  
  > urls.py  
  > views.py  
  > blogs  
  > django_rest_main  
  > __pycache__  
api > views.py > ...  
1 from django.shortcuts import render, get_object_or_404  
2 # from django.http import JsonResponse  
3 from students.models import Student  
4 from employees.models import Employee  
5  
6 from .serializers import StudentSerializer, EmployeeSerializer  
7 from rest_framework.response import Response  
8 from rest_framework import status  
9 from rest_framework.decorators import api_view  
10 from rest_framework.views import APIView  
11 from django.http import Http404  
12  
13 from rest_framework import mixins, generics, viewsets  
14 from blogs.models import Blog, Comment  
15 from blogs.serializers import BlogSerializer, CommentSerializer  
16  
17
```

Create the classes in the VIEWS.PY:

```
File Edit Selection View ... DjangoREST_APIProject  
EXPLORER  
DJANGOREST_APIPROJECT  
  api  
  > __pycache__  
  > migrations  
  > __init__.py  
  > admin.py  
  > apps.py  
  > models.py  
  > serializers.py  
  > tests.py  
  > urls.py  
  > views.py  
  > blogs  
  > django_rest_main  
  > __pycache__  
  > asgi.py  
api > views.py > CommentsView  
200  
207  
208 # uses Viewsets the easier way  
209 class EmployeeViewSet(viewsets.ModelViewSet):  
210     queryset = Employee.objects.all()  
211     serializer_class = EmployeeSerializer  
212  
213  
214 # uses nested serializers  
215 class BlogsView(generics.ListCreateAPIView):  
216     queryset = Blog.objects.all()  
217     serializer_class = BlogSerializer  
218  
219 class CommentsView(generics.ListCreateAPIView):  
220     queryset = Comment.objects.all()  
221     serializer_class = CommentSerializer
```

10. View the BLOG and COMMENT models:

HTTP 200 OK
Allow: GET, POST, HEAD, OPTIONS
Content-Type: application/json
Vary: Accept

```
[  
  {  
    "id": 1,  
    "blog_title": "this is a blog 1",  
    "blog_body": "this is a blog body 1"  
  },  
  {  
    "id": 2,  
    "blog_title": "this is a blog 2",  
    "blog_body": "this is a blog body 2"  
  }  
]
```

Blog title

Blog body

13. To also show the comments under BLOGS model, update the SERIALIZERS.PY:

```
File Edit Selection View ... DjangoREST_APIProject  
EXPLORER  
DJANGOREST_APIPROJECT  
  api  
    __pycache__  
    migrations  
  __init__.py  
  admin.py  
  apps.py  
  models.py  
  serializers.py  
  tests.py  
  urls.py  
  views.py  
  blogs  
    __pycache__  
    migrations  
    serializers.py  
    admin.py  
    models.py  
blogs > serializers.py > BlogSerializer > Meta  
1 from rest_framework import serializers  
2 from .models import Blog, Comment  
3  
4 class CommentSerializer(serializers.ModelSerializer):  
5     class Meta:  
6         model = Comment  
7         fields = "__all__"  
8  
9 class BlogSerializer(serializers.ModelSerializer):  
10    # comments is the related_name in MODELS.PY  
11    comments = CommentSerializer(many=True, read_only=True)  
12  
13    class Meta:  
14        model = Blog  
15        fields = "__all__"
```

To view the BLOGS pa
