## Topic: 17. DRF Ordering / Sorting

Speaker: Personal | Notebook: API Development using Django Framework

1. This comes from the REST\_FRAMEWORK.FILTERS. Update the API\VIEWS.PY as:

Update the BlogsView class:

- 2. Run your browser and you can view the IDs in ascending or descending order.
- 3. You can also sort by blog\_title:
- 4. Just like the SEARCH\_PARAM where we override it with our own label, we can do the same thing for ordering, we use the ORDERING\_PARAM. Add this in our SETTINGS.PY:
